Xtrm2Matt"Reliable and stable"

Thats what it says when you install it (i was looking today)..

Soooo.. if its 'Reliable' and 'Stable', then why have i had to reformat about 8 times within the last 2 months. That works at 1 reformat a week.

WinXP sure is reliable and stable!

when i installed XP it said   windows XP 'Reliable' and 'Stable'

then the setup crashed... restarted my PC
