lol, like someone that models in renx doesn't know that he has to put w3d in his data to make it work

Check my screenshots. 1 in RenX how i want it to look. and then after i save it the second SS is the effect. You can see the different lights aren't there. I made Target Spot lights (Create-> lights -> target spotlight)

I also tried to import lights from the original REF interior, but if i change that lights nothing happens either.
