Ack this keeps coming up, give me one second, I will just take some pictures...

Okay then!

First on the vehicle place this script, the message must match both messages in the next to screen shots for it to work:

And then on the infantry, you must have one of these scripts attached for each vehicle that has a different custom that is sent (you would only use a different custom if you wanted the vehicle to have a different sit position):

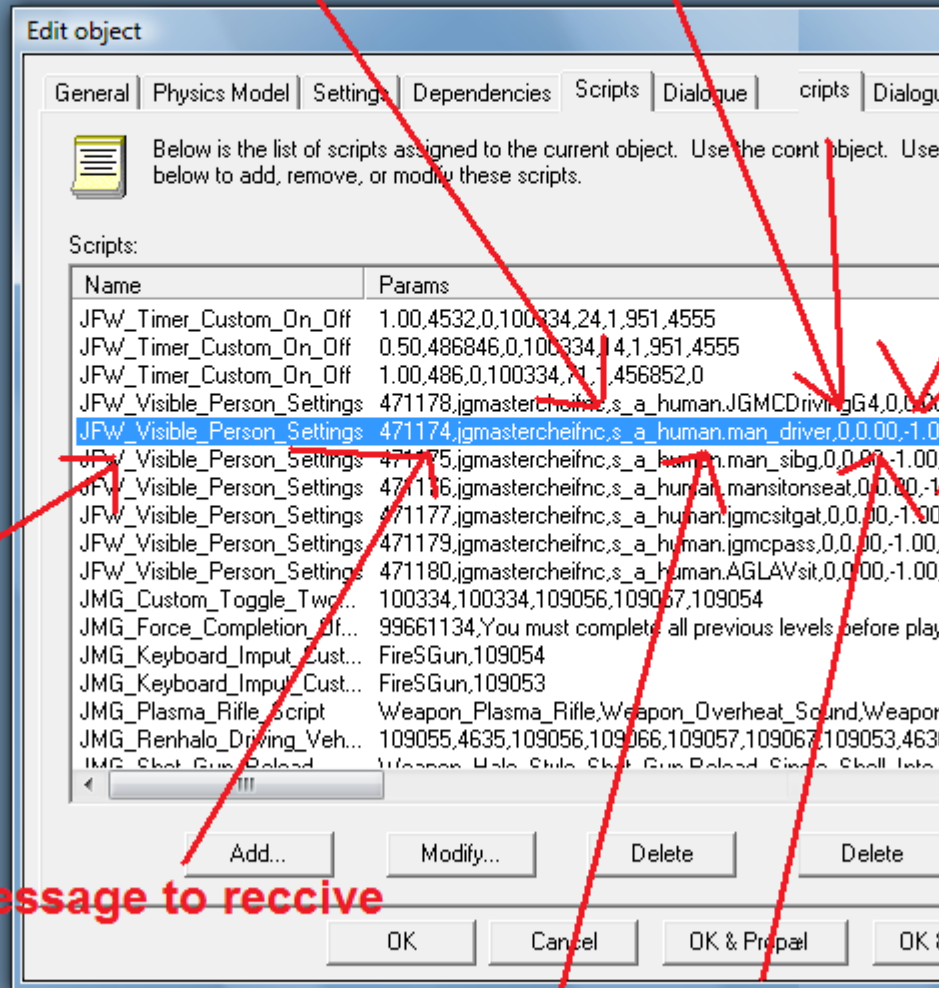

Hope that helps you guys and sorry about the image size, I always forget how high my resolution is until after I have finished editing them.
