update,

played some more this weekend and the game crashed 2 different times. in both cases the screen went blank i opened task manager and alt+tabbed out of the game, to see vista message saying "your video driver has stopped responding and has since recovered". the game however was completely crashed and i had to shut it down.

so then i assume its clear as to what the problem is...

or is there anything else that can cause this?

btw my temps at the time, CPU @49C, mobo @48C, GPU @59C
