This my current dsl speed plan ok the website '  
3000-6000 / 512-768 Kbps

now ingame i know theres 2 commands

set\_bandwtih or something  
and sbbo

i think i messed something up cause i got 600 ping for a while when nothing running and never had this high ping in over 8 months so

inagme when i put in these commands...what should i put

6000000?
