Patching Would Decrease the Download size and enale to fix errors in a quick and easier mannor the first download would be large about 100mb to 200mb for a TC and then the rest would be smaller depending on the seriousness (sorry bad english) of a problem or depending on if the patch will patch in new weapons, maps ect. So it would be about 10-50mb to patch. But... If its just a couple script problems an update may only be 1mb or so.
