on *:text:Zion:#channel:/echo 4\$nick has just called your name from \$chan

This will listen on the channel "#channel" for the word "Zion" and then echo who said your name and what channel it was on into the current channel in red colour.

Changing "Zion" to your nickname, and "#channel" to the channel you want to listen on.

Place this into the Remote tab of the script editor.

Note: If the " 4" doesn't want to work right, delete it and press CTRL and K on your keyboard, then choose a colour number from the palette.
