Crimson wrote on Tue, 27 May 2008 04:36The master server list is downloaded from this and other locations:

http://renguard.com/_priv_beta/index.bin

If you can download that file without a problem, then it can't be a network issue. In fact, if you're connecting to these forums, then you should be able to download this file. This file contains the master server locations for your RG client to connect to.

I was able to download that file no problem. And yes as you can see I can connect to these forums fine.

The problem must lie elsewhere....
