The AMD is faster clock per clock versus the Intel. Intel can only beat AMD by uping their fsb and increasing their raw speed. Right now Intel has the fastest cpu out there, as the AMD is pretty much reach the end of it's road in terms of raw speed. The XP3200 is the best AMD you can buy, and I believe the 3.06 is the best for Intel. I'm a AMD guy so I don't pay alot of attention to Intel. For the money AMD is usually cheaper. But it's usaully up to the buyer on what they want.
