EDIT:

August and September of this year will be crucial for Science. By early-mid 2009, we would have enough evidence to know whether parallel dimensions exist. It helps to follow what the scientific community is upto.

2009?

Link please

A good overview of the entire LHC project can be found here at the official CERN site:
<http://public.web.cern.ch/public/en/LHC/LHC-en.html>

The links on the left contain useful information. The experiment to find the possibility of extra dimensions is called ATLAS.

<http://public.web.cern.ch/public/en/LHC/ATLAS-en.html>

The ATLAS people released this video as well. Nothing is proven and firm right now...but it may not or may change in a couple month and years. All we have now is theories and speculation but maybe not for long?

Thanks!

Although one thing I noticed. It really doesn't say "parallel dimensions", but "extra dimensions"... and not necessarily the Sci-fi kind. What they seem to be trying to do is to see if dimensions beyond what we can experience exist.

1st Dimension - straight line

2nd Dimension - flat pictures

3rd Dimension - how we see the world

4th Dimension - currently beyond our specific understanding.

It's this 4th dimension and beyond that the experiments are designed to reveal.
