DarkDemin wrote on Mon, 23 June 2008 09:01Sounds like a virus to me.

Fuck me, how long have you been using the Interwebs?

It's called demo scene, making a program that is 64k or less, that plays an awesome video with music that's got bump-mapped textures and shit.

They tend to go really heavy on your processor though.

google "Demo scene" and look for sites that have a few, Some really good stuff, heck someone made a full 3d video game using Demo scene.
