Well, you are using a desktop and HP wouldn't roll out a x64 laptop if all the drivers for it weren't supported, so im not worried about that. So compatibility is better than I thought it would be which is good to hear, but if you see a x64 download and a x86 one, which do you get?

x64 because it can take advantage of the performance upgrade?
That's actually true, I installed ATI's Catalyst drivers on my Vista machine, I had X1550 at the time, instead it detected as X1300, I've done nothing wrong fyi.
