I have a Geforce GTX 280, yet I have a 15" 1024x768 monitor. Do I overkill or what?

For those who have large resolution screens and go down to lower res for some games, I personally can't stand doing that. If I had a high res screen and a GPU not capable of getting good FPS for it, I'd lower the detail settings etc, not the resolution. I think lowering the resolution only looks acceptable on CRTs, but on LCDs it gets ratyher ugly.
