I'm not 100% sure what you're trying to do. Are you trying to use your TV in place of a monitor, or trying to duplicate the image on your monitor onto the TV?

Also, why would you want sound coming out of both your PC speakers and TV speakers?

Either way, the audio splitter you're looking for is this. This will just split your audio signal into 2 separate channels, allowing one to go to the PC speakers, and another to the TV. Then to get the audio to the TV, you will need this. (Note: I just found the first search result, for either product, anything like it will do, it doesn't have to be that exact one.)

For the video, answer the first question I asked about replacing or duplicating, and I'll have an answer for you.

EDIT: I think I understand your question, and for whatever reason, you wanna duplicate it...

So, lemme clarify: The only port your vid card has is a VGA port? No DVI or S-video?

VGA to RCA is very tricky, because VGA carries a different signal than RCA, so I'm pretty sure it only works in certain circumstances. Therefore, I'm not entirely sure what you wanna do is possible.
