---

MLRS and FLAMER have 2 muzzles and of i use right click it shoots from 1 muzzle only (at flamer it seems like it shoots from 2 muzzles but only 1 does damage and it's easy to hit something small if ur close to it) To see how this example works i hooked a vold auto rifle to the flamer (no flame only volt) and if press right click it shoots only from one muzzle (the second one duz nothing)
