ok you're now confusing me.

I'm talking about stuff like.. I'm sure you've played counter-strike and Source mm'kay? When joining a server sometimes it will make you download custom sounds (Which thankfully you can disable on Source games), And basically.. that is what I'm talking about, so is there any chance you can disable the sounds being downloaded onto your pc client side?

Hope this is making more sense, if not I give up.
