Caveman wrote on Sun, 07 September 2008 10:56lm gonna say this one more time because you dont seem to understand... The slowest routers you can get is 54g (54mbit) they dont make any slower anymore. Even if you got one from years ago then you'd have 11b which is 11mbit 1 more then your connection speed anyway.

Go and get yourself a Wi-Fi dongle....And before you ask, get any one.
im try to look more into this
