XCorupt69 wrote on Wed, 10 September 2008 19:19Its not the 05 error, thats just related to UAC/run as admin which is one of the first things I mingled with in the registry. Any, heres the current status:

1)with scripts 3.4.4 it DID work, but from that installer, what are the "example shaders", and "bloom"?

2)So it means, anyone with a native DX10 video card, their renegade will NOT work unless they manually find, download, and install scripts 3.0+ (or 2.9.2 +ren3d)?

3)What was that laucher, downloaded it anyway, but don't wanna try it just yet because my renegade is still being picky but atleast working.

Renegade has a bug in it that causes random crashes on startup when using versions of Windows newer than Windows Server 2003 (aka NT 5.2). That launcher runs the game with a specially built compatibility fix.
