danpaul88 wrote on Mon, 15 September 2008 08:21 SuperFetch is very good at speeding up loading of most programs. Large, RAM hungry, games would be one of the exceptions. Renegade would NOT fall under this category though, as it's RAM usage is pretty low compared to games like Crysis and Supreme Commander.

ReadyBoost... while it may provide some small gains, I doubt it's worth buying a USB flash drive for it. If you happen to have one lying around that you will never use ever again, then sure, use it for ReadyBoost, but don't go out of your way to buy one. Hacking it to work with a USB hard drive on the other hand, is pointless, and, as previously mentioned, would simply slow your PC down.

EDIT: Fixed poor sentence structure.

Well, since I don't have any games besides ren and Spore do you think i would really Need it? I do have a cheap ass 400 buck Compaq PC so its slow..... So better off or on for me?
