Hey, If this is old news, or already discussed sorry but I don't hear other people with this exact problem. What the SS below is showing is what happened when I got in a vehicle. As soon as I did the vechile vanished, and blue screen of death occurred, when I exited I was fine, the vech was gone and I couldn't fire until I restarted the game. This is an issue because it happens about 1 of every 10 times but only with nod.

Roof (to foxtrot): Your vehicle has been auto-bound to you because you bought it and were the first to enter. Use /unbind to relinquish ownership. You can use /lock to prevent your teammates from stealing the vehicle.
