Well then the problem I think it could be causing could be it's own topic, anyways, I think it is causing C&C3 to spit out this error:

Now someone else told me that's an directx issue, I have checked to make sure it is the latest version of directx, it is, with my computer I can load C&C3 fine, load a map fine, when I go to build something it crashes and gives that error, and now I think I know what you might be thinking now, "are you sure your computer meets the minimum specs?", I would say yes except for the video card which is an intel which is apparently not supported, now knowing that I guess you would say case solved I can't run it with my video card, now I say no to that, I could run C&C3 perfectly fine before SP1 and that is why I am trying to get it uninstalled.
