Level Editor Question.

What I want to do is get an overhead view of the standard maps in a .jpg or similar format. I've seen new maps released with this type of screenshots. I have Gmax and Renegade Tools/Renegade Level Editor installed and I know my next step would be to open one of the maps in the level editor but I'd be willing to bet that I cant open a .mix.

Could someone walk me through this or point me to the right tutorial?

Thanks in advance.
