OK I'm sure some of you guy's know of the windows logon screen well a guy made a renegade logon screen for windows xp. i have been trying to years to get it to work well i got it.

There is a program called LogonStudio The files I'm uploading are 3 different ones.

1.logon studio

2.renegade_xp_login zip, now this one is the hard one if you can get it to work than have fun, and you wont need to install logon studio.

3.Renegade Logon XP exe , this one i converted so it will work in logon studio if you can't get it to work that you can always convert the 2 file to work.

I will also give the preview of it, for the people that don't know what I'm going on about.

i can't upload it here so stay tuned for the file.

OK i got it.

Logon Stuff
