OK I'm sure some of you guy's know of the windows logon screen well a guy made a renegade logon screen for windows xp. i have been trying to years to get it to work well i got it.

There is a program called LogonStudio The files I'm uploading are 3 different ones.

- 1.logon studio
- 2.renegade_xp_login zip, now this one is the hard one if you can get it to work than have fun, and you wont need to install logon stuido.
- 3.Renegade Logon XP exe, this one i converted so it will work in logon studio if you can't get it to work that you can always convert the 2 file to work.

I will also give the preview of it, for the people that don't know what I'm going on about.

i can't upload it here so stay tuned for the file.

OK i got it. Logon Stuff
