Lone0001 wrote on Tue, 14 October 2008 19:01 Oh computer speakers I thought you said Tv speakers...

Yea usually if you hear that sound it means you have put the sound up too high (obviously) and possibly that the speakers might need to be replaced soon.

No it is speakers that use this type of wire.

<http://images.google.com/images?q=speaker%20wire&ie=UTF-8&oe=utf-8&rls=org.mozilla:en-US:official&client=firefox-a&um=1&sa=N&tab=wi>

But that's not what's causing it

I changed it around and my pc is plugged into my switch box (via stereo to rca) and it makes little noise I can barely hear it but once I turn the volume up full blast with no music playing, I hear that weird noise. And along with that my dvd player is plugged into the switch box and the noise is really loud when I select the input it's plugged into if anyone wants recording video or audio that can help please ask
