---

I have a seagate sata barracuda hard drive and a hard drive kit to make it work.

I run a gateway solo laptop.

I install the drive in the kit plug it into usb windows does it's install thing.

I try to open the drive and it say's insert a cd well there is no place to put one lol.

It say's it's a protable media player.

How can i fix it to work and so i can install stuff on it?

if you need more info ask and i will give.

plz help ty
