---

when i put the scripts 3.4.4 in i get a error when i start ren  
it says i have to update my directx version to run scripts.dll  
i have dx9c

i install renedage like i noramly do it works fine till i put these scritps in  
even if i make a backup copy of ren befor i put scripts in.

so after i put them in i get that error.

then i put my backup copy of ren back in cause the scripts didnt work,  
now after i replace backup copy i start renegade and the game starts i can hear rene play but my  
screen is black, can see anything  
has any1 else had this problem?

here a copy of my dxdiag if that helps

tyvm
