Crash wrote on Tue, 28 October 2008 06:29Hey I play on the demo server RxD and when I try to use the updated version it cuts me out and renegade is having an error.

I'm not fully sure what it is but I know the newer ebon.dll file is where the trouble lies at. Could you maybe run like you did on the beta with the features of the updated one?

I use demo 2 but i have the fv allways.dat ,allways2.dat if u have fv copy them it might solve some problems (not sure about this but untill i coppied i had my problems.
