Hello everybody,

I hope you can help me with the following problem:

I installed renegade a couple of weeks ago, but I had a lot of performance problems and Renegade didn't work so well. Now are those performance problems gone and I can play renegade, but the problem is at some points windows gets a BSOD and renegade quits. Some of those points are:

- When my gun is empty
- When I start a campaign
- When I pressed ESC during a game and I want to return to the game.

There may be more points where I get this BSOD, but I didn't find them yet, and I'm not gonna look for them.

The only thing I have changed is that the resolution is set back from 1024 x 768 to 800 x 600. My PC specs are the following (the renegade min spec's are behind it between ()):

Windows 98 SE (windows 98/2000/ME/XP)

PIII 450 Mhz (PII 400 Mhz)

128 Mb RAM (96 MB RAM)

8 GB free (700 Mb for the game)

36x or higher (4x)

16 Mb on the VGA card (16 Mb)

3D accelerator (3D accelerator)

640 Kbit (56,6)

What can be the problem?

Another problem I got is when Renegade quits the windows bar's are white instead of gray, does someone know the solutions for this to?

Greetz, Cybertinus

ps: I'm sorry for my bad English, I just can't type it very good, I'm from The Netherlands.
