Strange one this... Ive been playing ren at 1440x900 for months now with no problems at all.. I goto load renegade and it crahes straight to desktop.. I try to load it again and wwconfig pops up so I keep on trying at the same resolution but I get the same thing so I knock the resolution down and down even more until the game loads... So now for some unknown reason I can't play Ren above 1280x800.

I haven't done anything to the video card or anything like that. The only difference from yesterday is I installed MotoGP 08.
