Infinintit like this:

my renegade crashed and started to run at 7fps every where, soon i found out that if i ran level edit when i ran ren it worked but then i dint get wol server listings

thats some computer viris, its like skynet from terminator (im scared now)

Just wait for 5 minutes or so, It's probably Ren Alert beat causing the delay or other PKG files that accumulate in size. To fix it delete all of the PKG files in your Renegade directory. You can probably get rid of the Ren Alert PKG as the installer version is coming with the release so you don't need it.
