Eyla folks,

For the first time I have my Vista PC. Renegade is working correctly, untill I install RenGuard. Error <some numbers> x.

So, if I want to play, I'll have to start the game without RenGuard...

That's f...ed up because I can't join server because of being forcerg'ed. So... I play Jelly AOW 2 untill the same will happen there. >_>

Any idea's?
            Thanks.

(PS: This is a nice colourful message)
