I just reinstalled renegade onto my computer after deciding to give this game another shot. However, every time I try to load it, windows says that the program has stopped. I'm running Vista 32bit and changed the comparability to run it as XP SP2 and administrator. Still no luck with the original renegade build or its latest patch. The same error occurs with renguard 1.037, here are the error details:

I've been trying to fix this thing forever, any help would be greatly appreciated. Thanks!
