[`*`] element 1

[`*`] element 2[`/list`]

[`list=2`]this is list 2

[`*`] element 1

[`*`] element 2[`/list`]

It's a standard pbpb3 function.

so like the others would be.

[`list type=A`]

[`*`]list item

[`*`]list item

[`/list`]

and

[`list type=1`]

[`*`]list item

[`*`]list item

[`/list`]

and could you explain how to put them in the pbpb admin i know the add bbcode thing but I'm still getting use to it all.

what i mean is

BBCode usage

witch would be

[`list type=A`]

[`*`]list item

[`*`]list item

[`/list`]

right?

HTML replacement

would be?
