wittebolx wrote on Fri, 19 December 2008 04:15Could be several things...

Try some things first, like for example:

1. Update you GPU drivers.
2. Set everything as default after doing that.
3. Start the game to see if that helped.
4. if not, what script version are you running for Ren?

the rest comes when you've tried the first 4

Scripts version does not matter for gamma controls

The brightness controls from ingame don't work in Windowed mode because it's using the brightness levels set for your desktop. Try adjust them in your video card driver's control panel.
