I just played in some 20 player game and then pnpn4life comes. He's a sakura. I hopped into my apc and drove over the field and in 3 seconds.. bOOM. apc gone.

I though that there were 4 ravesaws on the field so I get a sniper and get to the field and as soon as i showed my head (I jumped from behind the rock in front of base entrence) I am headshotted. Hmm i think, ns. Get next sniper and exactly the same happens to me. Then I look at the scores and see that the guy who killed me (pmpn4life) is in front with 10000 points while the number 2 only got about 1000 points. Very strange because he was a sakura for just 5 minutes. Then everybody already started calling him a cheater. So I thought, lets test this. i bought an apc, drove in front of AGT. And told everybody that i was going to test if he was a cheater. While I wrote that I saw pmpn4life putting his ramjet around the corner and shot me... BANG... i lost 300 healht (APC!!!) before I could move my ass a second shot came and my apc blowed to hell. meanwhile he had a score of 15000 while number 2 was still round 1000.

The badnews is that i think that it wasn't a server related cheat

I dont know which server it was but i was quite professional with all messages and commands (like !mods and !websites) I am 99% sure that EA is not going to do anything about this cheat and if it expands renegade will be death in 1 month :(

Anyone else spotted this cheat or any other cheats lately?

For those who dont believe me. I dont care. I have an ingame screenie with his extreme score compared to others. thats all.

Stupid msn resised the picture while the quality was already bad because of the JPG compression
