I was thinking about it, and wouldn't it be more fair for GDI to have the MRLS getting a 'rotatable turret' like on the screenshot:

Screenshot from the map Field_TS, which also contains the beta Medium Tank.

The Nod artillery can also rotate his turret, and the MRLS is the thing what GDI has, in place of Nod having the Artillery.

Would it be even possible to create/do this? And what are the thoughts about it in the public ? (therefor, I created the topic)
