Basically, I'm an old Renegade player that wants to start up again. But I'm having trouble installing the CorePatch2.
Whenever I open renguard to install PC2, it comes up with
an error saying "Failed : 404 Not Found -> Check Connections, close the program and try again"

I've tried about 100 times to re-do it. Installed renguard/renegade, patched over and over and still nothing.

Anyone have any ideas?
