Am not so good with routers but pretty much I wanna be a link system router

heres what I want, my internet speed is 1 mb up and 10 mb down and I want a router that is wireless but also the pcs connect DIRECTLY to the router wont lose internet speed, if it does not even that much but pretty much I want to have a router then when I do a speed test still say 1 mb up and 10 mb down

I called staples and they gave me some good info on one and were honest but I have to get one in best buy since I have a gift card so anyways staples told me this and that about dont get this or u will need to change ur network cables to cat 6 and such and dont get this one blah blah while bestbuy wont give me this info they keep trying to get me to buy the high price one I cant afford

as I said

a link system router

wireless

pc's plug into it wont lose speed

support mac filtering and WPA2

and anything else I need since I have lot of stuff this router will be running off (2 pcs 2 laptop 1 xbox live and my phones wifi)

the reason im asking here is for someone who has ALREADY OWNED ONE to give me some feedback of which one it should be out of all the ones they sell , i dont wanna get ripped off

also note all my cables are cat e5 and such

Well this one be ok

<http://www.newegg.com/Product/Product.aspx?Item=N82E16833124010>

One person said by a g-router another said buy N-router kinda hard to know And i dont wanna fuck this up

I know it well lose speed connect wireless but I dont want seep lose only to the ones that are connected to it
