Caveman wrote on Mon, 05 January 2009 12:21 Well its all backwards compatible so if you got wireless N router.. It would work with your b,G, G+ Super G, G MIMO.

If you can you might as well get the N but you wont get any faster download speeds from the internet. You will only notice difference in speeds between computers, with that said its only going to apply if you have two computers connected that is quicker then what your router can send out now. For example they would need to be G+ to have any speed increases what so ever. Also wireless N has a greater signal distance so if you live in an old building it will help with your signal.

Well I looked at them today and did not ahve enough money and with there limits and A guy i talekd to I bought a

linksys wireless g broadband router model:WRT54G2
