I was talking to my friend about this and I now believe there is no such thing as time travel. He simply said "there is no such thing because if there were people from the future would have traveled back into our time by now". That makes perfect sense and makes me believe there is no time travel. Unless your theory of multiple parallel universes is true, with the fact that we are the first of the multiple universes and there are no future universes at this time but that makes no sense.
