andr3w282 wrote on Wed, 07 January 2009 19:06TBH if your really going to want to make a browser in VB, you may as well make it in VB.net (INBEFORE HATRED)

Reason why im saying this is because the "browser - html display" object exists in vb.net, as well as the creation of menus is quite easy and possible.

If you actually meant to make a "good" browser, don't do it in vb, go for c++ or at least c#. The difference between making this in vb.net and vb is quite little and you'll probebly have less difficuly and a more advanced interface in .net. Also the .net has objects for tabbed pages.

Also, if your looking for programmign samples, examples, tutorials, snippets, or documentation i highly suggest staying away from places like youtube :\

where wo find VB.net?
