Thanks a lot for your help.

But till now we have something puzzled such as:

1)How to make the brenbot actived in order to make the commands like the !donate, !backup and so on can be used by players?

2)How to setup up the RANK Ladder System in our server?

3)How can we do some remote control to the server by our own microcomputers?

4)And could you please supply more details about the process of server setup which likes the ATOMIX (describe it step by step?) if you have time?

Thank you again for your help.
