I upgraded to the 32-bit version of Windows 7 today. It's running pretty well, however it's very similar to Vista. I haven't had any major issues with it so far, and all my devices and drivers are working correctly. The new Start menu and interface is pretty cool, but it's taking some getting used to. Except for media player 11. It sucks.

Anyone else installing the beta, remember to download the update Microsoft released for media player 11, or you could fuck up any MP3 files you try to play. (How that got past pre-beta testing is beyond me.)
