I have a jar file i want to start up when my windows starts up. I added it to registry to start up by adding a string value in

HKEY_LOCAL_MACHINE > SOFTWARE > MICROSOFT > WINDOWS > CURRENTVERSION > RUN

Which IF you add a string value there, name it and type the location of the file it will run that file on start up. And that learned by removing tons of virus in the past

And it works but the window shows up and I want it to run without showing it or its windows so how can I go upon doing this like make it run in background is there a command line to add to the string value location or anything?
