haremanAny such cheat would need to be server side to work and if you do not have the mod on your renegade copy you would get a server mismatch.

FAR from true for some cheats, actually. There are ones that are a bit tricky to master but can be used to see the other end of the map. Plus there are tons of others you don't see.

There are some things you can do to prevent version mismatch and let you unlock a cheat or two. Possibly/probally even more things you can do that will affect gameplay, such as the one mentioned in the first post.

Don't take my word as official on what cheats exist, but it is possible to edit your presets and still get on a server (but it's practically unplayable, depends on what you do).

Not that anyone is going to believe me because I'm not posting proof.....
