Goztow wrote on Sun, 18 January 2009 23:34IIRC Renegade uses different ports for non dedicated hosting (it chooses between different ones). The easy solution is to put your router in DMZ (demilitarized zone) which will open all ports. However, this means you're not behind your hardware firewall anymore (as everything is open), so you should at least run a software firewall then.

You can usually do this in your router admin.
Im aware of what it is, but is there any other way?
