Subject: Could Router or Server Fuck up Your Ren?
Posted by _SSnipe_ on Sun, 25 Jan 2009 22:19:29 GMT

me and 4 freinds were on a server and using that servers TS
I lost connection due to a time out
when I went to rejoin THAT SEVER said I could not get in I think it said port problem or
something, no ban or kick message but all other servers work...so I go back to ts, says there is no
server ts when i tryed to connect back to talk to my freinds, they pagedd me and said they are on
it but when i try to connect says its not up and running, but yet me 4 freinds are on there server
and using there ts and I cant connect to server or use there ts since it says it does not exist

i rebooted my pc and nothing changed, check router and no logs or bands or anything like that

so wtf can it be?
