Bump

After looking at my budget, and priorities, I've decided to go for something more midline, and AMD based.

CPU: AMD Phenom II 720

(<http://www.newegg.com/Product/Product.aspx?Item=N82E16819103649>)

Motherboard: <http://www.newegg.com/Product/Product.aspx?Item=N82E16813128377>

GFX: XFX Radeon 4850

(<http://www.newegg.com/Product/Product.aspx?Item=N82E16814150337>)

Power Supply: Corsair 750TX

(<http://www.newegg.com/Product/Product.aspx?Item=N82E16817139006>)

I need recommendations for a case that's built well, and has good ventilation; bells and whistles are not a huge deal.

I also need input as to what RAM I should select. I've looked at different DDR3 Dual Channel kits of varying speeds, but I'm having trouble setting my sights on one. 2GB should be enough for now.
