WalrusThe faster you go the slower time moves, This was proved by an experiment involving a 747 and two very accurate clocks. One clock was left on the ground and the other on the plane, after a few hundred flights the clocks were checked and the times were very slightly different, by a few nano seconds.

The clock on the plane, when you think about it, was going very slowly back in time

Personally I like to use the other method of time travel, I hear wise men in London call it 'Beer' It is possible to lose entire nights to this most awesome of talisman..

lol... i though the difference was 30 seconds on an atomic clock... w/e
